

Marval

SINCE 1985

INNOVATIVE **INSULATING GLASS** SOLUTIONS AND TECHNOLOGIES

COMPLETE
LINES

COMPLETE LINES

The complete lines that **Marval** offers today are the result of 40 years of experience in the production of insulating glass technology and equipment.

A success made possible by the determination and experience of the people who have pursued a clear objective: to make **simple, reliable machines** with **excellent technology**, all values that can be found in Marval's automatic and semi-automatic lines.

A choice that led Marval to work with all kinds of machines and solutions for the insulating glass industry,

skills that have been applied in the current project of automatic lines thanks to which it is now possible to go from the glass sheet to the finished insulating glass, ready to be installed in doors and window. A process that – thanks to "made in Marval" – can be extremely **simple, convenient, fast** and even economical, because the Como-based company has always been famous for its advantageous **price/quality** ratio offered to the market.

Complete lines for the production of insulating glass, in which different parts of the plant wash, couple and press the double or triple glazing unit in rapid succession.

For those looking for the highest performing solution, with high levels of productivity that can be tailored to each customer's needs, Marval offers its own **automatic line**, where the operator only has to position the frame, which has already been butylated, on the glass at the beginning of the line. High productivity is ensured by adding the "ROBO SEAL" automatic sealing machine to the plant, which helps to exponentially speed up production cycles.

Marval also offers **semi-automatic lines** that feature the same quality and efficacy as their bigger counterparts, but are configured for companies interested in small production volumes. The main difference is the need to seal the insulating glass manually, hence the required presence of a specialised operator.

Marval's engineers have designed and manufactured sturdy structures for the Marval line, using stainless steel for all parts in contact with water, a choice that guarantees durability, solidity, continuity of production, and elimination of any risk of oxidation. Lines that are managed with remarkable ease due to highly efficient electronics and, above all, software.

Lines that, like all "made in Marval" solutions, are the foundation of a partnership destined to last.
